

AMENDMENTS TO THE CLAIMS

1. (Currently amended) A wound film dispenser, comprising:

a base having bottom, front, ~~and~~ back walls, and first and second ends walls, and an open top defining an interior channel;

a lid hingedly attached to the base, the lid including a lid wall opposite the bottom wall of the base; ~~and~~

retention walls mounted in the first and second ends of the base, the retention walls attached to the bottom wall and extending at an angle from the bottom wall into the interior channel, the retention walls each including an aperture adapted to receive an end of a roll of wound film, the retention walls being oblique to each of the bottom, front, back walls, and the first and second end walls; and

a brace extending from each retention wall and positioned to engage the end walls, thereby angling the retention walls into the interior channel, each brace being a side flap separated by a fold line from the retention wall, the fold line being generally perpendicular to the bottom wall, the brace having a side edge tapered away from the fold line at an angle corresponding to an angle at which the retention walls extend away from the end walls.

2. (Previously Canceled).

3. (Previously Canceled).

4. (Previously amended) The wound film dispenser of claim 1, wherein the side flap is wedge-shaped.

5. (Original) The wound film dispenser of claim 1, wherein the end walls include a major flap hinged to the back wall of the base and a minor flap hinged to the front wall, the retention wall being proximate the minor flap.

6. (Original) The wound film dispenser of claim 1, wherein the retention wall aperture is semi-circular in shape.

7. (Previously amended) The wound film dispenser of claim 1, wherein the flap extends from a side of the retention wall proximate the back wall of the base.

8. (Previously amended) The wound film dispenser of claim 1, wherein the flap extends from a top edge of the retention wall aperture.

9. (Original) The wound film dispenser of claim 1, wherein the base, lid, and retention walls are manufactured from a unitary piece of material.

10. (Original) The wound film dispenser of claim 9, wherein the material is die-cut single ply chipboard.

11. (Previously Canceled).

12. (Previously Canceled).

13. (Previously Canceled).

14. (Previously Canceled).

15. (Previously Canceled).

16. (Previously Canceled).

17. (Previously Canceled).

18. (Previously Canceled).

19. (Previously Canceled).

20. (Previously Canceled).

21. (Previously Canceled).
22. (Previously Canceled).
